

ProofGate: Public Plans, Private Results

AI supplies the method.
The company keeps its know-how.

Blind Workbench: supplier renewal with synthetic contracts

Supplier renewal needs private know-how

**The quote changes.
Private rules set
the negotiation target.**

An employee needs a useful brief
without giving a hosted model
the contract register or rule bodies.

▼ Private decision rules

Private rules JSON · cents, basis points and service percentage

```
{  
  "maxIncreaseBp": 400,  
  "minimumSavingCents": 1000,  
  "minimumServicePct": 85  
}
```

Apply private rules

Rebind locally →

Reset synthetic worksheet

Compose, apply a private change, then rebind to measure the difference.

Synthetic contracts. Negotiation targets are potential outcomes.

An employee intention changes the method

**Within the next 60 days,
prepare at most two renewals,
earliest renewals first.**

Actual AI choices
60-day window
Earliest renewal first
At most 2 renewals

Admitted operation method

1. Select renewals within 60 days
2. Apply private price ceiling
3. Rank by renewal date
4. Keep 2 renewals
5. Render the negotiation brief

One previously unprepared public intention. Company records and rule bodies remain local.

A private change changes the useful brief

03 Useful private result

2 renewals; \$1060.00 potential annual saving (synthetic USD).

Middle Supplier

Potential saving 36,000 cents · negotiation ceiling 208,000 cents
Negotiate ceiling \$2080.00; potential annual saving \$360.00. Targets are not achieved savings.

Large Supplier

Potential saving 70,000 cents · negotiation ceiling 520,000 cents
Negotiate ceiling \$5200.00; potential annual saving \$700.00. Targets are not achieved savings.

► Before the private change

Save exact internal brief

Attempt external export

1 independently confirmed internal save

One bounded workflow with synthetic data. No generic production-security or formal noninterference guarantee.

gemini-3.5-flash	gemini-3.5-flash-lite	512	134217728

☒ AI semantic inspection ☐ Reserved flow flag · Structural boundaries always enforced ☒ Literal signature feed ☒ Allow synthetic provider traffic ☒ Allow internal draft save

Allowed models

☒ Gemini 3.5 Flash ☒ Gemini 3.5 Flash-Lite

Activate policy Accepted policy v16 · Feed v2

► Non-executable signature feed

► All accepted policy bounds

Benign advisory admitted
Hostile paraphrase quarantined

Budget blocks new dispatch
Stale save adds no effect
Manual external export refused

Internal save: 1 exact
independently observed record

Whole-source quarantine is an observed control decision. It does not prove downstream causal benefit.

Evidence and limits

Observed proof

4 original advisory cases, 1 each
2 original compositions + 1 new intention
Private rebinds add zero new attempts
Exact internal saves observed independently

24 proof + 16 walkthrough + 8 intention = 48
Original combined 36 / 32 forecast exceeded
Model inference: 15 of 48 charged wires

4 automated walkthroughs; no human rehearsal
48.93s backup: seven paced UI captures
10 historical unknowns charged; tariff unpriced

Boundary and measurements

Synthetic data, owner-funded hosted AI
No demonstrated local LLM backend
Trusted local host and employee
Potential savings, not achieved savings
No production or formal security proof

339/339 offline runner checks pass

One actual composition: 3.66s overall
Hosted spans: 3.65s, local: 1.61ms
MCP save call: 10.95ms, separate

**AI supplies the method.
The company keeps its know-how.**

A judge can change a private quote or rule
and inspect the useful result.
